

MEDICAL STANDARDS DIRECTORY (MSD)

This document reflects the current medical standards for retention, flying classes, and special operational duty for the USAF. These are the standards referenced in AFI 48-123 and are reviewed annually (at a minimum) through the **Medical** Standards Working Group **(previously known as the Aircrew Standards Working Group)**. The Chief of Physical Standards Development at the Air Force Medical Support Agency is the MAJCOM/SGP point of contact for any updates. If a service member does not meet applicable medical standards, refer to AFI 48-123 for required actions.

To refer to a medical standard use “MSD, DATE OF MSD, SECTION LINE”. For example, when referencing Celiac Disease in a Narrative Summary, use “MSD, 24 May 18 v2, I51”.

For the purpose of Aeromedical Waiver submissions, if there is an applicable chapter in the Aeromedical Waiver Guide ([AMWG](#)) then a “See AMWG” link may be in the comments section. Always check the appropriate Waiver Guide before submitting a waiver package as it is a guide for how to apply current Aeromedical Standards and prepare Aeromedical Waivers. If you have any additional questions, contact your MAJCOM/SGP Office.

Changes to the 24 May 2018 MSD are highlighted in yellow. Version 2 has clarifications. [C30](#) Corneal dystrophy – removal of references to topographical pattern suggestive of keratoconus (TPSK). Aircrew Waiver Guide updated to allow consideration of waiver for corneal cross-linking therapy for trained assets that need to meet GBC/MOD/FC II/FC III/RPA standards to be treated with waiver potential once stable and passing vision standards (like PRK). [C31](#) Corneal refractive therapy (CRT) or orthokeratology (Ortho-K), active use or use within the last 90 days will require waiver, otherwise no waiver needed. Deleted [C52](#) as Optical Coherence

Tomography (OCT) and Goldmann applanation tonometry (GAT) IOP in IFCI will capture true pathology. [C8](#) Ocular Hypertension will now only be disqualifying for INITIAL applicants (not trained personnel) and require waiver (for initial). There will be a protocol to follow to eliminate falsely elevated IOPs. Deleted [C22](#) Conjunctivitis. Deleted [C35](#) Refractive Surgery – uncomplicated treatment no longer requires waiver. If complications and waiver sought, see [C33](#) and Aircrew Waiver Guide. Deleted [C66](#) Migraine or its variants. Deleted [C73](#) near point of convergence. [C80](#) Color vision, standard is ≥ 55 , CCT done at initial qualification only. If waived, will get indefinite waiver. Additionally, MOD only is qualified at 35. [C81](#) Stereopsis, if waiver granted, it will be indefinite with continued annual testing. IFC must pass at 40 arc seconds or “B” on OVT. Add to Vision Table One: Note 8 - Standards of refraction for any meridian and anisometropia shall be used for Initial Flying Class physical only. Waiver dispositions shall be indefinite as they represent the Air Force’s acceptance of the investment risk to bring a Service Member onto flight status. Note 9: Astigmatism > 2.0 requires evaluation to rule out pathologic etiology but does not require a waiver if no underlying pathology discovered.

[G4](#) & [G5](#) comment – Sleep apnea with AHI and RDI ≤ 15 may have code 31 removed at 30 days of compliance. [L19](#) Migraine was expanded to include other headache disorders. Deleted [L20](#) Acephalgic migraine. [L21](#) headaches – language broadened to account for lack of [C66](#) and [L20](#). [M15](#) & [M16](#) Hypothyroidism – For MOD only, if thyroid replacement needed to treat hypothyroidism, make DNIA until all symptoms resolved. No waiver required unless underlying condition requires waiver. Deleted [I63](#) Splenectomy as it is covered by [N24](#). [N24](#) Splenectomy is now disqualifying for retention so that ALC code can be applied. [P16](#) and [P17](#) Hyperhidrosis – clarified conditions so that symptoms or treatment severe enough to affect duties is disqualifying. ACS review is required if treated with other than topical means. [Q15](#) has been updated with comments from now deleted [Q17](#). Fear of flying (unsuited) is not the same as a flying phobia (unfitting). [N4](#) - Leukemias removed from this standard and relies on [Q3](#) to capture them. [N6](#) Polycythemia – removed the lab values from the standard making the diagnosis alone disqualifying. Vision Note 7 changed to allow MOD continued duties pending arrival of corrective lenses.

[Section U](#) changes: [Section U](#) applies to Groups 2 & 3 only. (4 & 5 are RPA). Group 1 and Commercial Off The Shelf (COTS) are excluded from [Section U](#). If a USAF member does not meet the minimum standards, employment for SUAS-O duty is a line decision (not a medical waiver). Deleted [U1](#) – SUAS-Os are special duty

personnel and will be empaneled to Flight Medicine. Deleted [U2](#) – SUAS-O must meet retention medical standards IAW AFI 48-123 and MSD – this is assumed by virtue of being a military service member. [U7](#) changed to remove annual certification requirement and only require a one-time medical certification for training.

Eyes and Vision Disqualifying Conditions		“X” = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
C1	Any disease, injury, infection process, or sequelae involving the eye that is resistant to treatment and/or results in: Distant visual acuity that cannot be corrected to the retention vision standards listed in Item C2, and/or a central field of vision defect, in the better eye, that reduces the field of view less than 20 degrees from fixation in any direction.	X	X	X	X	X	X	X	X	
C2	Vision Standards. Retention standards for distant visual acuity, regardless of cause that cannot be corrected to at least numbers below. For Flying and SOD See Table One .									FOR FLYING AND SPECIAL OPERATIONAL DUTY VISION STANDARDS See TABLE ONE AT END OF SECTION
	Better Eye									
	20/20									
	20/30									
	20/40									
	20/50									
	20/60	X	X	X	X	X	X	X	X	
C3	Pterygium which encroaches on the cornea more than 3 mm or interferes with vision, or is progressive, or causes refractive problems.	X	X	X	X	X	X	X	X	
C4	Current aphakia or current or history of dislocation of a lens.	X	X	X	X	X	X	X	X	
C5	Deficient night vision, as determined by history, of such a degree that the member requires assistance in travel at night.	X	X	X*	X*	X*	X*	X*	X*	*In trained assets, history is confirmed by appropriate electrophysiological tests at the ACS.
C6	Glaucoma with demonstrable changes in the optic disc or visual fields or not amenable to treatment.	X	X	X	X	X	X	X	X	
C7	Glaucoma. As evidenced by intraocular pressure of 30 mmHg or greater by applanation tonometry, secondary change in the optic disc, and/or visual field defect associated with glaucoma. Note: Pigmentary dispersion syndrome (PDS) is not medically disqualifying for flying (includes Initial Flying Classes) unless associated with elevated intraocular pressures 22 mmHg or greater by applanation tonometry.		X	X	X	X	X	X		Trained aircrew with glaucoma require consultation (review or evaluation) with the ACS prior to waiver consideration. See AMWG
C8	Ocular hypertension (Preglaucoma). Two or more applanation tonometry measurements of 22 mmHg or greater, but less than 30 mmHg, or 4 mmHg or more difference between the two eyes. Note: Abnormal pressures obtained by a noncontact (air puff) tonometer or Schiotz must be verified by applanation tonometry. Adjustment of applanation tonometry measurements based on corneal thickness for medical qualifications purposes is not approved.		X*	X*	X*	X*	X*	X*		* Disqualifying only for INITIAL not trained See AMWG

[RETURN TO TABLE OF CONTENTS](#)

		"X" = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Eyes and Vision Disqualifying Conditions										
C9	Enucleated eye or absence of an eye	X	X	X	X	X	X	X	X	
C10	Vision correctable only by the use of bilateral contact lenses or uncommon corrective devices, (e.g. telescopic lenses).	X	X	X	X	X	X	X	X	
C11	Aniseikonia when incapacitating signs or symptoms exist that are not easily treatable with standard ophthalmic spectacle lenses.	X	X	X	X	X	X	X	X	
C12	Diplopia when symptoms are severe, constant, and in a zone less than 20 degrees from the primary position.	X	X	X	X	X	X	X	X	
C13	Diplopia in any field of gaze, either constant or intermittent, including history of.		X	X	X	X	X			Diplopia noted only at the end point of extreme gaze is considered normal and is not disqualifying.
C14	Hemianopsia when bilateral, permanent, and based on an organic defect.	X	X	X	X	X	X	X	X	
C15	Visual Fields: Any peripheral or central scotoma, other than physiologic.		X	X	X	X	X	X*		*Central scotoma is disqualifying for MOD
C16	Contact lenses that correct near visual acuity only or that are bifocal, or that are fit with the monovision techniques.		X	X	X	X			X	
Lids										
C17	Any condition of the eyelids which impairs normal eyelid function or comfort, or potentially threatens visual performance.		X	X	X	X	X	X		
C18	Epiphora, nasolacrimal duct obstruction		X	X		X				
C19	Ptosis, any, except benign etiologies which are not progressive and do not interfere with vision in any field of gaze or direction.		X	X		X				
C20	Dacryocystitis, acute or chronic.		X	X		X				
C21	Dacryostenosis.		X	X		X				
Conjunctiva										
C22	Conjunctivitis, chronic, allergic. DELETED					X				DELETED 4 May 18
C23	Trachoma, unless healed without visually significant scarring.		X	X		X				
C24	Xerophthalmia (dry eye syndrome).		X	X		X				See AMWG
Cornea										
C25	Any corneal disorder (including keratoconus) that demonstrates progression, requires long term treatment, surgical intervention or results in spectacle corrected visual acuity below the level specified in item C2.	X	X	X	X	X	X	X	X	See AMWG
C26	Vascularization or opacification of the cornea for any cause which is progressive or reduces vision below standards.	X	X	X	X	X	X	X	X	
C27	Keratitis, chronic or acute, if the condition is recurrent, requires prolonged treatment, or leads to opacification or other sequelae that interferes with vision.		X	X	X	X	X	X		

[RETURN TO TABLE OF CONTENTS](#)

		“X” = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Eyes and Vision Disqualifying Conditions										
C28	Corneal ulcers or recurrent corneal erosions.		X	X	X	X	X	X		
C29	History of traumatic corneal laceration unless it does not interfere with vision.		X	X		X				
C30	Corneal dystrophy of any type, including keratoconus of any degree and abnormal corneal topography.		X	X	X	X				See AMWG
C31	Corneal refractive therapy (CRT) or orthokeratology (Ortho-K), active use or use within the last 90 days.		X	X	X	X				
C32	Lamellar or penetrating keratoplasty (corneal transplant).		X	X	X	X				
C33	History of approved keratorefractive surgery procedures, including PRK, LASEK, epi-LASIK, and LASIK accomplished to modify the refractive power of the cornea are disqualifying if the surgical outcome results in the member's inability to meet established vision standards or interferes with the member's ability to perform his/her duties. History of lamellar keratoplasty (LK), penetrating keratoplasty (PK), conductive keratoplasty (CK), phakic intraocular lenses, or corneal implants (i.e. INTACS) accomplished to modify the refractive power of the eye are disqualifying regardless of visual outcome.	X	X	X	X	X	X	X	X	Uncomplicated treatment no longer requires Aeromedical waiver. Member should be DNIF until vision stabilizes. Approved treatments are: PRK, LASEK, epi-LASIK, and LASIK. If complications occurred or outcome dictates waiver, see Aeromedical waiver criteria for PRK, LASEK, epi-LASIK, and LASIK, listed in the AMWG.
C34	History of refractive surgery to include radial keratotomy (RK) or any laser procedures, implantable contact lenses (e.g. ICL), or corneal implants (e.g. INTACS), accomplished to modify the refractive power of the cornea are disqualifying regardless of outcome and not eligible for aeromedical waiver		X	X	X	X				Aeromedical waiver criteria for PRK, LASEK, epi-LASIK, and LASIK, are listed in the AMWG.
C35	Phototherapeutic keratectomy (PTK), PRK, LASIK, epi-LASIK, LASEK – DELETED									DELETED 4 May 18 See C33.
Episclera/Sclera										
C36	Episcleritis, chronic or acute, if the condition is recurrent, or requires prolonged or frequent treatment other than artificial tears.		X	X		X				
C37	Scleritis, acute or chronic, any etiology		X	X	X	X	X	X		
Uveal Tract										
C38	Acute, chronic or recurrent inflammation of the uveal tract (iris, ciliary body, or choroid), except for healed traumatic iritis.		X	X		X				
Retina/Vitreous										
C39	Retinal detachment, bilateral.	X	X	X	X	X	X	X	X	See AMWG
C40	Retinal detachment, unilateral, which results from organic progressive disease or results in uncorrectable diplopia, or visual acuity or visual field defects worse than retention standards (C2).	X	X	X	X	X	X	X	X	See AMWG
C41	Retinal detachment and history of same.		X	X	X	X				See AMWG
C42	Degenerations and dystrophies of the peripheral retina that are potentially progressive, associated with vision loss or increase the risk of retinal detachment, including lattice degeneration, atrophic holes and retinoschisis.		X*	X*	X*	X*				* Lattice Degeneration with refraction <= -5.50 is not disqualifying. Waiver potential for LD with refraction from -5.75 to -8.00 exists. See AMWG

C65	Any traumatic, organic, or congenital disorder of the eye or adnexa, not specified above, which threatens, or potentially threatens, to intermittently or permanently impair visual function.		X	X	X	X	X	X	
C66	Migraine or its variants, to include acephalgic migraine- DELETED								DELETED 4 May 18. See L19 and L22.
C67	History of any ocular surgery to include lasers of any type, not otherwise specifically covered in other sections.		X	X	X	X			
C68	Current or history of retained intraocular foreign body.		X	X	X	X			
Heterophoria and Heterotropia									
C69	Esophoria greater than 10 prism diopters, at near or distance.		X	X*		X*			*FC II and III required to perform scanner duties (per classification guide) these apply. If not required to perform scanner duties then C75-C78 apply. For the purpose of the MSD scanner duties are defined by the requirement to assist with safety clearance checks of their aircraft from outside obstacles within 200 meters.
C70	Exophoria greater than 6 prism diopters, at near or distance.		X	X*		X*			
C71	Hyperphoria greater than 1.5 prism diopters.		X	X*		X*			
C72	Heterotropia, including microtropias and monofixation syndrome, at near or distance.		X	X*		X*			
C73	Near point of convergence greater than 100 mm- DELETED 11 May 18		X	X*		X*			*FCIII not required to perform scanner duties. “No scanner duties” is to be included in certification of the examination.
C74	History of extraocular muscle surgery or strabismus therapies is disqualifying and requires complete evaluation of ocular motility by a competent eye care professional to look for problems.		X	X*		X*			
C75	Esophoria greater than 15 prism diopters.					X*			
C76	Exophoria greater than 8 prism diopters.					X*			
C77	Hyperphoria greater than 2 prism diopters.					X*			*PJs, TACP, only
C78	Heterotropia greater than 15 prism diopters, at near or distance.					X*			
C79	Heterophorias. More than 1.5 prism diopter of hyperphoria, 10 prism diopters of esophoria, or 6 prism diopters of exophoria requires a thorough evaluation for other eye pathology motor and sensory abnormalities, by an optometrist or ophthalmologist.						X*		
Color Vision and Depth Perception									
C80	Color vision deficit or anomaly of any degree or type as measured by CCT score of less than 55.		X	X	X	X	X	X*	CCT done at initial qualification only. If waived, will get indefinite waiver. * qualified at CCT >= 35 See AMWG

Eyes and Vision Disqualifying Conditions		“X” = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
C81	Failure of the VTA or OVT (Optec 2300) stereopsis testing is considered disqualifying if the failure occurs with best corrected visual acuity, regardless of level of uncorrected visual acuity, and requires completion of a local ocular motility and macular examination by an ophthalmologist or optometrist and review by member's MAJCOM and the ACS. Passing is 40 arc sec or “B” on OVT. [NO WAIVER REQUIRED if they get B (40 arc sec) or C (30 arc sec) or D (25 arc sec) or E (20 arc sec) or F (15 arc sec).]		X	X		X*	X**			If waiver needed and granted, it will be indefinite with continued annual testing. *If not required for AFSC per classification guide, place initial waiver in PEPP or AIMWTS without extensive work-up required by other AFSCs. **Only for Tactical Air Control Party (1C4X1) and Air Liaison Officer (13LX). See AMWG

[RETURN TO TABLE OF CONTENTS](#)

TABLE ONE: Vision & Refractive Error Standards for FC/SOD

(See notes below) [See AMWG](#)

	FC I	FC IA	FC II (Pilot)	RPA Pilot	FC II (Non-pilot) and FC III	GBC	MOD
Distant Vision in each eye (Corrected)	20/20	20/20	20/20	20/20	20/20	20/20	20/20 (Better eye)
Near Vision in each eye (Corrected)	20/20	20/20	20/20	20/20	20/20	20/20	20/20 (Better eye)
Any Meridian	+2.00 to -3.00	+3.00 to -4.50	+3.50 to -4.00	+5.50 to -5.50	+5.50 to -5.50	--	--
Astigmatism (see note 9)	1.50	2.00	2.00	3.00	3.00	--	--
Anisometropia	2.00	2.50	2.50	3.50	3.50	--	--
Note 1: Trained individuals found on routine examination to be 20/20 in one eye and 20/25 with current corrective lenses, but are correctable to 20/20 O.U. and who have normal stereopsis may continue flying until the appropriate corrective lenses arrive. These lenses must be ordered by the most expeditious means.							
Note 2: All aircrew must be refracted to their best corrected manifest visual acuity. Near vision must be correctable to 20/20 by OVT (Optec 2300). Bifocal prescriptions should be based on visual demands and cockpit working distances for Flying Class II/III and RPA Pilot. The use of spectacles to correct aircrew's distance visual acuity to better than 20/20 is encouraged							
Note 3: Cycloplegic Policy: For all initial qualification or for waiver consideration, a cycloplegic refraction must be done using 1% cyclopentolate (Cyclogel®), two drops, 5-15 minutes apart. Examination will be performed no sooner than one hour after the last drop and within two hours of the last drop of cyclopentolate. Required data: (1) minimum cycloplegic refractive power required for each eye to attain a visual acuity of 20/20. If 20/20 visual acuity cannot be attained under cycloplegic conditions, further clinical evaluation may be required.							
Note 4: Use of hard, rigid, or gas permeable (hard) contact lenses within 3 months before the examination or soft contact lenses 1 month before all initial flying examinations is prohibited. Document DD Form 2808 appropriately to ensure this requirement has been met.							
Note 5: Complex refractive errors that can be corrected only by contact lenses are disqualifying.							
Note 6: Optional wear of contact lenses for aircrew members is outlined in AFI 48-123 and Knowledge Exchange .							
Note 7: For MOD, individuals found on routine examination to be 20/20 in one eye and 20/25 with current corrective lenses, but are correctable to 20/20 may continue to perform Missile Operations duties until the appropriate corrective lenses arrive. These lenses must be ordered by the most expeditious means.							
Note 8: Standards of refraction for any meridian and anisometropia shall be used for Initial Flying Class or Special Operational Duty physicals only. Waiver dispositions shall be indefinite as they represent the Air Force's acceptance of the investment risk to bring a Service Member onto flight status.							

	“X” = Standard applies								Comments
	Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Eyes and Vision Disqualifying Conditions									
Note 9: Astigmatism > 2.0 requires evaluation to rule out pathologic etiology but does not require a waiver if no underlying pathology discovered.

		"X" = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Ears and Hearing Disqualifying Conditions										
D26	Asymmetric hearing loss as evidenced by a 25 dB or greater difference between the left and right ears at any two consecutive frequencies.		X	X	X	X	X	X		*If otherwise asymptomatic, restriction from flying is not required during evaluation and waiver process. See AMWG

TABLE 2: Acceptable audiometric hearing level for Air Force							
Unaided hearing loss in either ear with no single value greater than:							
Frequency (HZ)	500	1000	2000	3000	4000	6000	Comments
H-1	25	25	25	35	45	45	Class I and IA, IFCII, RPA Pilot, IFCIII, AF Academy, initial GBC, and selected career fields as noted in the Officer and Enlisted Classification Directories (AFOCD/AFECD).
H-2	35	35	35	45	55	—	AF enlistment, commission, initial MOD, SERE, continued GBC, flyers require evaluation for continued flying (See Aircrew waiver guide for details on the evaluation).
H-3	Any loss that exceeds the values noted above, but does not qualify for H-4.						H-3 profile requires evaluation and MAJCOM waiver for continued flying, and Audiology evaluation for fitness for continued active duty.
H-4	Hearing loss sufficient to preclude safe and effective performance of duty, regardless of level of pure tone hearing loss, and despite use of hearing aids.						This degree of hearing loss is disqualifying for all military duty. These require evaluation for continued service via either ARC Fitness for Duty (FFD), Worldwide Duty (WWD) processing, or review by the DAWG, IAW AFI 10-203 and 41-210 for Initial RILO.

Chest Wall and Pulmonology Disqualifying Conditions		"X" = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
G1	Symptoms of chronic or recurrent pulmonary disease, or residuals of surgery, which preclude satisfactory performance of duty, interference with exercise tolerance, causes frequent absences from duty or require ongoing specialty medical care more than annually.	X	X	X	X	X	X	X	X	This may include but not limited to: bronchitis, silicosis, extensive pulmonary fibrosis, and pleural fibrosis.
G2	Other lung or chest wall diseases or abnormalities that preclude satisfactory performance of duty, or require ongoing specialty medical care more than annually.	X	X	X	X	X	X	X	X	
G3	Asthma of any degree, reactive airway disease, intrinsic or extrinsic bronchial asthma, exercise-induced bronchospasm, or IgE (Immunoglobulin E) mediated asthma.	X	X*	X*	X	X*	X*	X	X	*History of asthma requires a waiver for initial qualification.
G4	Airmen with severe or moderate obstructive sleep apnea (diagnostic polysomnogram AHI or RDI greater than 15) treated with positive airway pressure (PAP).	X	X	X	X	X	X	X	X	See L22 - L23 for Sleep Disorders.
G5	Airmen with severe or moderate obstructive sleep apnea (diagnostic polysomnogram AHI or RDI greater than 15) treated with non-PAP modalities (positional therapy, oral appliances, etc.), who continue to have symptoms despite their treatment or require supplemental oxygen or stimulant medication to maintain wakefulness.	X	X	X	X	X	X	X	X	The diagnosis must be based upon a nocturnal PSG and the evaluation of a provider credentialed and privileged in sleep medicine. Airmen with mild obstructive sleep apnea (diagnostic Polysomnogram AHI and RDI <=15), do NOT require an Initial RILO, UNLESS they continue to
G6	Airmen with mixed or central sleep apnea, regardless of AHI or RDI values.	X	X	X	X	X	X	X	X	have symptoms of daytime somnolence OR they require oxygen therapy, OR they require prescribed stimulant medication. Once stable without adjustments for 30 days can have the Code 31 removed without any deployment restrictions after approval by the DAWG. The DAWG will ensure a duty limitation is placed on a 469 stating "member requires reliable electricity at billeting when deployed." See COCOM reporting instructions for guidance.
G7	Current or history of sleep apnea or other clinical sleep disorders, regardless of prior treatment.		X	X	X	X	X	X		See AMWG. See L22-L23
G8	Active tuberculosis, where curative therapy requires 15 or more months. NOTE: Latent TB infection is not disqualifying but must be evaluated (and given chemoprophylaxis, if appropriate), following current CDC guidelines.	X	X	X	X	X	X	X	X	
G9	Positive PPD (tuberculin skin test) or Quantiferon test, without documented evaluation or treatment.		X	X	X	X

Section H: Heart and Vascular USAF Medical Standards

Combat Controller (1C2X1): Continued service must meet FCIII and GBC standards. In addition, initial exams need to meet interservice school requirements (SSR). SSR PAGE CRO and STO (13DXA and 13DXB): Must meet FCIII standards. In addition, must meet sister school requirements to attend school. SSR PAGE Combat Weather (1W0X1, 1W0X2, 15WXX): Must meet FCIII standards. In addition, must meet sister school requirements to attend school. SSR PAGE Pararescue (1T2X1): Must meet FCIII standards. In addition, must meet sister school requirements to attend school. SSR PAGE RPA Sensor Operator (1U0X1): Must meet GBC standards. SERE: Must meet SERE requirements on SERE tab. Also must meet FCIII requirements for continued jump status and interservice requirements to attend school. SERE SSR TAC-P (1C4X1, 13LX), if Ground Only: GBC standards. Otherwise must meet FCIII and GBC standards. In addition, initial exams must meet sister service requirements to attend school. SSR PAGE										
Heart and Vascular Disqualifying Conditions		“X” = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Heart and Vascular System										
H1	Arteriosclerotic heart disease, when associated with myocardial infarction, congestive heart failure, persistent major rhythm disturbances, repeated angina attacks, or silent ischemia at a low to moderate workload.	X	X	X	X	X	X	X	X	Note: Refer to ARC supplements when managing cases on ARC members.
H2	Any degree of coronary artery disease.		X	X	X	X	X	X	X	See AMWG
H3	Myocardial infarction. Individuals sustaining a myocardial infarct will have an initial RILO within 90 days of an event.	X	X	X	X	X	X	X	X	
H4	Angina pectoris.	X	X	X	X	X	X	X	X	
H5	Maintenance on any type of medication for the treatment or prevention of angina, congestive heart failure, or major rhythm disturbances (ventricular tachycardia, ventricular fibrillation, symptomatic paroxysmal supraventricular tachycardia, atrial flutter, or atrial fibrillation).	X	X	X	X	X	X	X	X	
H6	History of myocardial infarction, angina pectoris, or other evidence of coronary heart disease including silent ischemia.		X	X	X	X	X	X	X	See AMWG
H7	Recurrent cardiogenic syncope regardless of etiology (unless clearly identified by a precipitating cause which can be avoided).	X	X	X	X	X	X	X	X	See L14
Conduction Disorders/Arrhythmias										
H8	Supraventricular tachyarrhythmias (including atrial fibrillation, atrial flutter, paroxysmal supraventricular tachycardia), unless successfully ablated, and not associated with structural heart disease. Note: single episode of atrial fibrillation clearly associated with reversible cause and successfully treated is not disqualifying for retention.	X	X	X	X	X	X	X	X	See AMWG
H9	History of symptomatic or asymptomatic major dysrhythmia. Major dysrhythmias include supraventricular tachycardia, atrial tachycardia, atrial flutter, atrial fibrillation, ventricular tachycardia, ventricular flutter, ventricular fibrillation, asystole and syndrome of inappropriate sinus tachycardia.		X	X	X	X				See Aircrew waiver guide and Disposition of ECG Findings guide for additional information.
H10	Ventricular fibrillation or sustained ventricular tachycardia.	X	X	X	X	X	X	X	X	See AMWG
H11	Symptomatic premature ventricular contractions which are significant enough to interfere with satisfactory performance of duty.	X	X	X	X	X	X	X	X	

[RETURN TO TABLE OF CONTENTS](#)

		"X" = Standard applies								Comments
Heart and Vascular Disqualifying Conditions		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
H12	Symptomatic or asymptomatic second degree Type II or third degree atrioventricular block, or symptomatic second degree I atrioventricular block. Exception is atrioventricular blocks which are clearly associated with reversible cause.	X	X	X	X	X	X	X	X	
H13	History of or ECG evidence of Brugada pattern, Congenital Long QT syndrome, arrhythmogenic RV cardiomyopathy (ARVC), or Hypertrophic Cardiomyopathy.	X	X	X	X	X	X	X	X	
H14	Verified history of major electrocardiographic conduction defects, such as Mobitz II second-degree A-V block, third degree A-V block, left bundle branch block (LBBB), Wolff-Parkinson-White (WPW) pattern/syndrome, or Lown-Ganong-Levine (LGL) syndrome.		X	X	X	X	X	X	X	See AMWG
H15	Any other resting 12-lead ECG findings considered to be borderline or abnormal by ECG Library review, or known to be serial changes from previous records, unless a cardiac evaluation as directed and reviewed by the ACS/ECG Library reveals no underlying disqualifying disease.		X	X	X	X				See " Disposition for ECG Findings " for guidance whether the aviator/aircrew must be DNIF pending evaluation results and final recommendations from the ACS/ECG Library.
H16	Abnormal noninvasive cardiac studies by ACS/EKG Library review. Note: For rated officers, reports and copies of tracings/images of any cardiac study, (i.e., ECG, Holter monitor, echocardiogram, treadmill, stress myocardial perfusion imaging, CT scan for coronary calcium) accomplished for any clinical or aeromedical indication MUST be forwarded to the ACS ECG Library for review.		X	X	X	X				
H17	Pacemakers or implantable cardioverter-defibrillators.	X	X	X	X	X	X	X	X	
Inflammatory and Misc.										
H18	Myocarditis and degeneration of the myocardium.	X	X	X	X	X	X	X	X	
H19	Pericarditis. Chronic constrictive pericarditis, unless successful surgery has been performed and return of normal hemodynamics objectively documented. Chronic serous pericarditis.	X	X	X	X	X	X	X	X	
H20	Endocarditis, infectious (acute or subacute), and marantic, if resulting in residual cardiac dysfunction or if associated with valvular, congenital, or hypertrophic myocardial disease.	X	X	X	X	X	X	X	X	
H21	Pericarditis, myocarditis, or endocarditis, or history of these conditions.		X	X	X	X				See AMWG.
H22	Cardiomyopathy of any etiology, including but not limited to: hypertrophic, genetic, ion channel disorders, acquired, dilated, restrictive, and secondary forms.	X	X	X	X	X	X	X	X	See AMWG
H23	History of cardiac failure or cardiomyopathy, regardless of cause.		X	X	X	X				See AMWG
H24	Acute rheumatic valvulitis or sequelae of chronic rheumatic heart disease	X	X	X	X	X	X	X	X	See valvular heart disease (H26-H32).
H25	Thromboangiitis obliterans.	X	X	X	X	X	X	X	X	

[RETURN TO TABLE OF CONTENTS](#)

		“X” = Standard applies								Comments	
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty		
Heart and Vascular Disqualifying Conditions											
Congenital and Structural Abnormalities											
H26	History of valvular heart disease to include mitral valve prolapse; bicuspid aortic valve; pulmonic, mitral, and tricuspid valvular regurgitation greater than mild, aortic regurgitation greater than trace, and any degree of valvular stenosis.		X	X	X	X	X		X	See AMWG	
H27	Symptomatic mitral valve prolapse requiring treatment.	X	X	X	X	X	X	X	X	See AMWG	
H28	Moderate to severe aortic stenosis (valvular, subvalvular or supravalvular), even if asymptomatic.	X	X	X	X	X	X	X	X	See AMWG	
H29	Moderate to severe mitral regurgitation, any etiology, if symptomatic or associated with subnormal ejection fraction. Successful mitral repair with preservation of ejection fraction, no need for anticoagulants or anti-arrhythmics may be waived if exercise tolerance is normal, but DAWG review must precede surgery.	X	X	X	X	X	X	X	X	See AMWG	
H30	Severe valvular or subvalvular pulmonic stenosis. Successful correction of valvular pulmonic stenosis with balloon valvuloplasty may be waiverable, but DAWG review must precede the procedure.	X	X	X	X	X	X	X	X	Note: DAWG may defer to DP2NP as needed.	
H31	Symptomatic mitral stenosis generally associated with mitral valve area less than 1.0 cm sq.	X	X	X	X	X	X	X	X		
H32	Severe aortic insufficiency if symptomatic associated with left ventricular dilation or dysfunction.	X	X	X	X	X	X	X	X	See AMWG	
H33	Congenital and structural anomalies of the heart that are not normal structural variants. A patent foramen ovale that is not associated with embolic phenomena does not require MEB.	X	X	X	X	X	X	X	X		
H34	Congenital abnormalities of the heart and/or vessels, including those corrected by surgery or catheter-based therapeutic intervention.		X	X		X				See AMWG	
H35	History of significant traumatic heart disease.		X	X	X	X					
H36	Right or left ventricular hypertrophy or cardiac chamber dilation, verified by echocardiogram, unless evaluation and ACS review demonstrates it to be normal physiological response to athletic conditioning or other normal variant.		X	X		X					
H37	Orthostatic or symptomatic hypotension, or recurrent vasodepressor syncope.		X	X	X	X	X	X		See neurologic tab. See AMWG	
Vascular Disease											
H38	Disease and disorders of the aorta, including surgical or percutaneous therapeutic intervention, including but not limited to aneurysm, dissection, arteriosclerosis, collagen vascular disease, inflammatory conditions, and infectious diseases.	X	X	X	X	X	X	X	X		
H39	Peripheral and central vascular disease, if symptomatic, including claudication, skin changes or cerebrovascular events (including stroke, TIA, CVA, infarcts, etc.).	X	X	X	X	X	X	X	X	See L39	
H40	Raynaud’s phenomenon, if frequent, severe, associated with systemic disease or would limit worldwide assignability.	X	X	X	X	X	X	X	X		

[RETURN TO TABLE OF CONTENTS](#)

		“X” = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Heart and Vascular Disqualifying Conditions										
H41	Diseases and disorders of the arteries, including but not limited to aneurysm, dissection, arteriosclerosis, collagen vascular disease, inflammatory conditions, infectious diseases, Raynaud's or vasospastic disease, erythromelalgia, and diabetic vascular disease.		X	X	X	X				See AMWG
H42	Varicose veins. Severe pain limiting exercise/fitness testing or evidence of skin ulceration.	X	X	X	X	X	X	X	X	
H43	Periarteritis nodosa.	X	X	X	X	X	X	X	X	
H44	Chronic venous insufficiency (postphlebotic syndrome). When symptomatic or requiring elastic support or chronic anticoagulation.	X	X	X	X	X	X	X	X	
H45	Diseases and disorders of the veins, including surgical or percutaneous therapeutic intervention, including but not limited to aneurysm, recurrent thrombophlebitis, varicose veins with more than mild pain or complications, venous insufficiency with edema or skin ulceration, and inflammatory or infectious conditions.		X	X	X	X		X*		*Initial MOD only
H46	AV fistula of a major vessel.		X	X	X	X	X			
H47	Aneurysm or history of repair.	X	X	X	X	X	X	X	X	
H48	Deep venous thrombosis with repeated attacks requiring treatment or prophylaxis.	X	X	X	X	X	X	X	X	See AMWG
H49	Pulmonary embolus. (History of pulmonary embolus for FC I/IA/II/RPA/III.)	X	X	X	X	X	X	X	X	See AMWG <input type="checkbox"/> See G26
H50	Hypertensive cardiovascular disease. Diastolic pressure consistently more than 110 mmHg following an adequate period of therapy in an ambulatory status or history of hypertension associated with any of the following: More than minimal demonstrable changes in the brain. Heart disease related to the hypertension, including atrial fibrillation, moderate to severe left ventricular hypertrophy, and symptomatic systolic or diastolic dysfunction. Unequivocal impairment of renal function. Grade III (Keith-Wagener-Parker) changes in the fundi. Multiple drug therapy requiring inordinate amount of medical supervision, or requiring recurrent laboratory monitoring, after initial medical stabilization on medication.	X	X	X	X	X	X	X	X	A member should not be deployed during the initial stabilization period while medication dosage is being adjusted.
H51	Hypertension, not controlled to less than 140/90 with a single approved monotherapy agent (described in Aircrew Waiver Guide). Note: Asymptomatic personnel with average systolic blood pressure ranging between 141 mmHg and 160 mmHg, or average diastolic blood pressure ranging between 91 mmHg and 100 mmHg, may remain on flying status for up to 6 months (from the date the elevated blood pressure was first identified) while undergoing non-pharmacological intervention to achieve acceptable values.		X	X	X	X	X			See AMWG
H52	Any elevation in blood pressure due to secondary metabolic or pathologic causes until the underlying cause has been corrected, provided the primary condition is not disqualifying.		X	X		X

		"X" = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Abdominal and Gastrointestinal Disqualifying Conditions										
I1	Achalasia (cardiospasm) with dysphagia, frequent discomfort, inability to maintain normal weight or nutrition or requiring repeated dilation or surgery	X	X	X	X	X	X	X	X	
I2	Esophagitis, persistent and severe.	X	X	X	X	X	X	X	X	
I3	Chronic or recurrent esophagitis or GERD or esophageal motility disorders, not controlled by medications listed in "Official Air Force Aerospace Medicine Approved Medications" or with complications including stricture or reactive airway disease.		X	X	X	X	X	X		See AMWG
I4	Diverticulum of the esophagus that causes frequent regurgitation, obstruction, or weight loss, and does not respond to treatment or requires frequent specialty follow-up.	X	X	X	X	X	X	X	X	
I5	Esophageal stricture that requires an essentially liquid diet, frequent dilation or hospitalization, or causes difficulty in maintaining weight and nutrition.	X	X	X	X	X	X	X	X	
I6	Symptomatic esophageal disease including, but not limited to ulceration, diverticulum, varices, fistula, stricture, pronounced dilation, achalasia, dysmotility disorders, or Barrett's esophagus.		X	X	X	X	X	X		
I7	Gastritis, severe/chronic (confirmed by gastroscopic examination), with repeated symptoms requiring frequent lost duty time.	X	X	X	X	X	X	X	X	
I8	Gastritis or non-ulcerative dyspepsia, chronic or severe, not controlled by medications listed in "Official Air Force Aerospace Medicine Approved Medications",		X	X	X	X	X	X		
I9	Ulcer. Peptic, duodenal or gastric (confirmed by laboratory, imaging, or endoscopy), with repeated incapacitation or absences from duty or requiring frequent specialty follow-up.	X	X	X	X	X	X	X	X	See AMWG
I10	Peptic ulcer disease, active, refractory to treatment, or complicated by hemorrhage, obstruction or perforation.		X	X	X	X	X	X		See AMWG
I11	Other recurrent, incapacitating abdominal pain of such nature to prevent the member from performing his/her duties, frequent absences from duty, or requiring frequent specialty care.	X	X	X	X	X	X	X	X	
I12	Hiatal hernia with severe symptoms not relieved by dietary therapy, medical therapy or surgery.	X	X	X	X	X	X	X	X	
I13	Other types of hernias, if operative repair is contraindicated for medical reasons, or if not amenable to surgical repair and symptoms interfere with continued military duty.	X	X	X	X	X	X	X	X	

[RETURN TO TABLE OF CONTENTS](#)

		"X" = Standard applies								Comments
Abdominal and Gastrointestinal Disqualifying Conditions		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
I14	Abdominal wall hernia, other than small asymptomatic umbilical.		X	X		X				
I15	Wounds, injuries, scars, or weakness of the muscles of the abdominal wall which are sufficient to interfere with function.		X	X		X				
I16	Cirrhosis of the liver, if subspecialty follow-up is required or if there are complications, to include abnormal liver function.	X	X	X	X	X	X	X	X	See AMWG
I17	Hepatitis, any type, with EITHER impairment of liver function OR a need for specialty follow-up beyond the first six months.	X	X	X	X	X	X	X	X	See AMWG
I18	Any other chronic liver disease, viral disease carrier state, or sequelae of chronic liver disease, whether congenital or acquired, including but not limited to hemochromatosis, Wilson's disease, or alpha-1 anti-trypsin deficiency. Exception: if uncomplicated Gilbert's disease is the only diagnosis, no I-RILO or waiver is required.	X	X	X	X	X	X	X	X	See A32. See AMWG
I19	Amebic abscess residuals. Persistent abnormal liver function tests and failure to maintain weight and normal vigor after appropriate treatment.	X	X	X	X	X	X	X	X	
I20	Pancreatitis, acute only if complicated or with large persistent pseudocysts.	X	X	X	X	X	X	X	X	See AMWG
I21	Pancreatitis, chronic or recurrent, with steatorrhea, disturbance of glucose metabolism requiring insulin or hypoglycemic agents, or frequent abdominal pain requiring hospitalization or frequent absences from duty.	X	X	X	X	X	X	X	X	See AMWG
I22	Pancreatitis, any acute or chronic, regardless of cause, or history of the same.		X	X	X	X				See AMWG
I23	Peritoneal or other abdominal adhesions causing recurring episodes of intestinal obstruction characterized by abdominal colicky pain, vomiting, and requiring frequent admissions to the hospital or frequent absences from duty.	X	X	X	X	X	X	X	X	
I24	Crohn's disease, regional enteritis, granulomatous enteritis or enterocolitis.	X	X	X	X	X	X	X	X	See AMWG
I25	Ulcerative colitis or proctitis.	X	X	X	X	X	X	X	X	See AMWG
I26	Stricture of rectum. Severe symptoms of obstruction characterized by intractable constipation, pain on defecation, and difficult bowel movements that require the regular use of laxatives, enemas, or repeated hospitalization or frequent absences from duty.	X	X	X	X	X	X	X	X	
I27	Stricture or prolapse of the rectum.		X	X	X	X				
I28	Proctitis, chronic, with moderate to severe symptoms of bleeding, painful defecation, tenesmus, or diarrhea, with repeated admissions to the hospital or frequent absences from duty.	X	X	X	X	X	X	X	X	
I29	Proctitis, chronic, or symptomatic.		X	X		X				
I30	Hemorrhoids which cause marked symptoms or internal hemorrhoids which hemorrhage or protrude intermittently or constantly, until surgically corrected.		X	X	X	X				
I31	Anus. Impairment of sphincter control with fecal incontinence.	X	X	X	X	X	X	X	X	

[RETURN TO TABLE OF CONTENTS](#)

		"X" = Standard applies								Comments
Abdominal and Gastrointestinal Disqualifying Conditions		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
I32	Fecal incontinence.		X	X	X	X				
I33	Anal fistula, acute or chronic.		X	X	X	X				
I34	Ischiorectal abscess.		X	X	X	X				
I35	Familial polyposis.	X	X	X	X	X	X	X	X	
I36	Diverticulitis, symptomatic diverticulosis, or symptomatic Meckel's diverticulum.		X	X	X	X				See AMWG
I37	Congenital abnormalities of the bowel if symptomatic or requiring surgical treatment. Intestinal obstruction if due to any chronic or recurrent disease. Intestinal obstruction requiring surgery (excluding uncomplicated correction of childhood pyloric stenosis or intussusception, with no residual dysfunction).		X	X	X	X				
I38	Colectomy, partial, when hyperdefecation remains.	X	X	X	X	X	X	X	X	
I39	History of partial resection of the large or small intestine (not including appendectomy).		X	X	X	X				
I40	Colostomy, enterostomy, gastrostomy, or ileostomy when permanent or any other permanent artificial openings.	X	X	X	X	X	X	X	X	
I41	Gastrectomy, total.	X	X	X	X	X	X	X	X	
I42	Gastrectomy, subtotal with or without vagotomy, or gastrojejunostomy or pyloroplasty with or without vagotomy, when, in spite of good medical management, the individual: develops incapacitating dumping syndrome, develops frequent episodes of incapacitating epigastric distress with characteristic circulatory symptoms of diarrhea, or continues to demonstrate significant weight loss.	X	X	X	X	X	X	X	X	
I43	History of gastroenterostomy, gastrointestinal bypass, stomach stapling, or surgery for relief of intestinal adhesions.		X	X		X				
I44	Sinus or fistula of the abdominal wall.		X	X	X	X				
I45	Pancreatectomy, except for partial pancreatectomy for a benign condition that does not result in residual symptoms.	X	X	X	X	X	X	X	X	
I46	Pancreaticoduodenostomy, pancreaticogastrostomy, and pancreaticojejunostomy.	X	X	X	X	X	X	X	X	
I47	Proctectomy.	X	X	X	X	X	X	X	X	
I48	Proctoplexy, proctoplasty, proctorrhaphy, or proctotomy, if fecal incontinence remains after appropriate treatment.	X	X	X	X	X	X	X	X	
I49	Gastrointestinal bypass or stomach stapling, or any other procedure to alter gastric volume for control of obesity.	X	X	X	X	X	X	X	X	See AFI 44-102 3.5. Use of Weight Control Drugs and Surgery
I50	Gastrointestinal hemorrhage, regardless of cause (excluding minor hemorrhoidal bleeding).		X	X	X	X	X

Section K: Spine and Extremity USAF Medical Standards

Combat Controller (1C2X1): Continued service must meet FCIII and GBC standards. In addition, initial exams need to meet interservice school requirements (SSR). SSR PAGE CRO and STO (13DXA and 13DXB): Must meet FCIII standards. In addition, must meet sister school requirements to attend school. SSR PAGE Combat Weather (1W0X1, 1W0X2, 15WXX): Must meet FCIII standards. In addition, must meet sister school requirements to attend school. SSR PAGE Pararescue (1T2X1): Must meet FCIII standards. In addition, must meet sister school requirements to attend school. SSR PAGE RPA Sensor Operator (1U0X1): Must meet GBC standards. SERE: Must meet SERE requirements on SERE tab. Also must meet FCIII requirements for continued jump status and interservice requirements to attend school. SERE SSR TAC-P (1C4X1, 13LX), if Ground Only: GBC standards. Otherwise must meet FCIII and GBC standards. In addition, initial exams must meet sister service requirements to attend school. SSR PAGE										
Spine and Extremity Disqualifying Conditions		“X” = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Spine/Scapulae/Ribs, and Sacroiliac Joints										
K1	Congenital anomalies presenting functional impairment of a degree to preclude the satisfactory performance of duty.	X	X	X	X	X	X	X	X	
K2	Spina bifida, with demonstrable signs and moderate symptoms of root or cord involvement.	X	X	X	X	X	X	X	X	
K3	Spina bifida, when more than one vertebra is involved, if there is dimpling of the overlying skin, or a history of surgical repair for spina bifida.		X	X		X				
K4	Coxa vara, more than moderate with pain, deformity and arthritic changes.	X	X	X	X	X	X	X	X	
K5	Herniation of nucleus pulposus, when symptoms and associated objective findings are of such a degree as to require repeated hospitalization, significant duty limitations, or frequent absences from duty.	X	X	X	X	X	X	X	X	
K6	History of frank herniated nucleus pulposus or history of surgery or chemonucleolysis for that condition.		X	X		X				See AMWG
K7	Ankylosing spondylitis or other inflammatory spondylopathies, if requiring duty restrictions, frequent absences from duty, ongoing specialty follow-up greater than once per year, or immunomodulators/DMARDs.	X	X	X	X	X	X	X	X	See AMWG
K8	Spondylolysis or spondylolisthesis, when symptoms and associated objective findings are of such a degree as to require repeated hospitalization, duty restrictions or frequent absences from duty.	X	X	X	X	X	X	X	X	
K9	Symptomatic spondylolisthesis or spondylolysis.		X	X	X	X				See AMWG
K10	Deviation or curvature of spine. Scoliosis exceeding 30 degrees lumbar or thoracic curvature, or interfering with function, vocation, or wear of military uniform or equipment. Kyphosis/lordosis exceeding 55 degrees or interfering with function, vocation, or wear of military uniform.	X	X	X	X	X	X	X	X	See AMWG
K11	Lumbar scoliosis of more than 20 degrees or thoracic scoliosis of more than 25 degrees as measured by the Cobb method. Abnormal curvature of the spine of any degree in which there is a noticeable deformity when the examinee is dressed, in which pain or interference with function is present, or which is progressive.		X	X		X				See AMWG

		“X” = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Spine and Extremity Disqualifying Conditions										
K12	History of disease or injury of the spine or sacroiliac joints, either with or without objective signs, which has prevented the examinee from successfully following a physically active lifestyle or associated with local or referred pain to the extremities, muscular spasms, postural deformities, requires external support, requires frequent treatment, or prevents satisfactory performance of duties.		X	X	X	X				
K14	Granulomatous disease of the spine, active or healed.		X	X		X				
K15	Fractures or dislocations of the vertebrae.		X	X		X				Note: History of fractures of the transverse processes is not disqualifying if asymptomatic. See AMWG
K16	Juvenile epiphysitis with any degree of residual change indicated by x-ray or kyphosis.		X	X		X				
K17	Weak or painful back requiring external support.		X	X		X				
K18	Chronic back or neck pain, regardless of cause, which requires ongoing duty or deployment restrictions for over a year, or ongoing specialist follow-up more than annually, or frequent duty absences, or chronic/recurrent use of narcotics.	X	X	X	X	X	X	X	X	
K19	Recurrent disabling back pain due to any cause.		X	X	X	X				See AMWG
K20	Any surgical spinal fusion.		X	X		X				See AMWG
K21	Musculoskeletal, Spine, and Extremities. Any disease, condition, or deformity of the musculoskeletal system, which may impair duty performance or access to control facilities, is likely to progress, or which requires frequent use of analgesic or anti-inflammatory medication for control.		X	X	X	X	X*	X		*GBC: Include if condition may impair access to control facilities, is likely to progress, or requires frequent use of analgesic or anti-inflammatory medication for control.
Upper Extremities										
K22	Amputation of part or parts of an upper extremity that results in impairment equivalent to the loss of use of a hand.	X	X	X	X	X	X	X	X	
K23	Absence of any segment of the hand or digits.		X	X	X	X				
K24	Resection of a joint other than that of a finger.		X	X	X	X				
K25	Hyperdactylia.		X	X		X				
K26	Scars and deformities of the fingers, or hand, which impair circulation, are symptomatic, or impair normal function to such a degree as to interfere with the satisfactory performance of flying/controlling/missile duties.		X	X	X	X	X	X		
K27	Healed disease or injury of the wrist, elbow or shoulder with residual weakness or symptoms of such a degree as to interfere with the satisfactory performance of flying duty. Grip strength of less than 75 percent of predicted normal when compared with the normal hand (non-dominant is 80 percent of dominant grip).		X	X	X	X

		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Spine and Extremity Disqualifying Conditions										
K28	Joint ranges of motion, which impairs normal function to such a degree as to interfere with the satisfactory performance of duties and/or do not equal or exceed the following: Shoulder - Forward elevation to 90 degrees. Abduction to 90 degrees.	X	X	X	X	X	X	X	X	
K29	Joint ranges of motion, which impairs normal function to such a degree as to interfere with the satisfactory performance of duties and/or do not equal or exceed the following: Elbow Flexion to 130 degrees. Extension to 45 degrees of flexion.	X	X	X	X	X	X	X	X	
K30	Shoulder limitation of motion which precludes performance of duty.		X	X	X	X				
K31	Chronic dislocation of the shoulder or elbow, when not reparable or when surgery is contraindicated.	X	X	X	X	X	X	X	X	
K32	Recurrent shoulder instability.		X							
Lower Extremities										
K33	Recurrent hip or knee dislocation.	X	X	X	X	X	X	X	X	
K34	Verified history of hip dislocation within 2 years of examination, or degenerative changes on X-ray from old hip dislocation.		X	X		X				
K35	Verified history of congenital dislocation of the hip, osteochondritis of the hip (Legg-Perthes disease), or slipped femoral epiphysis of the hip with X-ray evidence of residual deformity or degenerative changes.		X	X		X				
K36	Joint ranges of motion, which do not equal or exceed the following: Hip: Flexion to 90 degrees. Extension to 0 degrees.	X	X	X	X	X	X	X	X	
K37	Internal derangement of the knee, if results in ongoing duty or deployment limitations for over a year, or requires ongoing specialist f/u more than annually, or causes frequent absences from duty.	X	X	X	X	X	X	X	X	
K38	Weak knee. Dislocation of semilunar cartilages or loose foreign bodies within the knee joint; or residual instability of the knee ligaments; or significant atrophy or weakness of the thigh musculature in comparison with the normal side; or limited range of motion or other symptoms of internal derangement; or a condition which would interfere with the performance of flying/controller duties.		X	X	X	X	X			
K39	Shortening of an extremity which exceeds 5 centimeters (2 inches).	X	X	X	X	X	X	X	X	
K40	Difference in leg length of more than 2.5 centimeters (from anterior superior iliac spine to the distal tip of the medical malleolus).		X	X		X				
K41	Joint ranges of motion, which do not equal or exceed the following: Knee: Flexion to 90 degrees. Extension to 15 degrees.	X	X	X	X	X	X	X	X	
K42	Chondromalacia or Osteochondritis dissecans if results in ongoing duty or deployment limitations for over a year, or requires ongoing specialist f/u more than annually, or causes frequent absences from duty.	X	X	X	X	X	X	X	X	
K43	Osteochondritis dissecans of the knee, or ankle, if there are X-ray changes.		X	X		X

		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Neurologic Disqualifying Conditions										
L15	Disturbances of consciousness (not due to head injury), or history of any medically unexplained disturbance of consciousness or where surgical intervention was necessary to correct the precipitating cause. *EXCEPTIONS: An isolated episode of neurocardiogenic or vasovagal syncope associated with venipuncture or prolonged standing (in military formation or similar benign precipitating event), lasting less than 1 minute in duration, followed by rapid and complete recovery, and neurological and cardiovascular evaluation by a flight surgeon reveals no abnormalities. Physiological loss of consciousness (LOC) caused by reduced oxygen tension, general anesthesia, or other medically induced LOC (excluding vasovagal syncope) provided there is full recovery without sequelae. G-induced loss of consciousness (G-LOC) during a centrifuge run (unless there are neurologic sequelae, or evidence that the G-LOC occurrence is associated with coexistent disease or anatomic abnormality). Inflight G-LOC caused by an improperly performed anti-G straining maneuver, or anti-G protective gear malfunction, with no physiologic abnormalities detected by flight surgeon on post-incident examination.		X	X	X	X	X	X		See AMWG
L16	Seizure/epilepsy, when not clearly provoked by an extrinsic factor (such as medication), whether anti-seizure medication is started or not. Note: For ARC members initiate WWD within 90 days of initial event (refer to ARC supplements). Note: Seizures following omission of prescribed medication or ingestion of alcoholic beverages are not indicative of the controllability of the disorder.	X	X*	X*	X*	X*	X*	X*	X*	*Seizures associated with febrile illness before age 5, with normal EEG, or post-traumatic seizures may be eligible for waiver. See AMWG.
L17	Seizure or convulsions provoked by trauma or extrinsic factors, including medication-related adverse effects, such as that seen with (but not limited to) Tramadol, Bupropion, Zolpidem.	X	X	X	X	X	X	X	X	Note: Retention determination to be made on case by case basis with Neurology Consultant to AF/SG or Consultant-designated specialist. See AMWG
L18	Truly epileptiform abnormalities to include generalized, lateralized, or focal spikes, sharp waves, spike-wave complexes, and sharp and slow wave complexes during alertness, drowsiness, or sleep are disqualifying. Generalized, lateralized, or focal continuous polymorphic delta activity or intermittent rhythmic delta activity (FIRDA or OIRDA) during the alert state is disqualifying, unless the etiology of the abnormality has been identified and determined not to be a disqualifying disorder. Benign transients such as Small Sharp Spikes (SSS) or Benign Epileptiform Transients of Sleep (BETS), wicket spikes, 6 Hertz (Hz) (phantom) spike and wave, rhythmic temporal theta of drowsiness (psychomotor variant), and 14 and 6Hz positive spikes are not disqualifying.		X	X	X	X	X	X		See AMWG
L19	Migraine and other headache disorders manifested by attacks requiring frequent absences from duty, mobility restrictions, or frequent specialty followup.	X	X	X	X	X	X	X	X	
L20	Acephalgic migraines. DELETED									Deleted 4 May 18

[RETURN TO TABLE OF CONTENTS](#)

		"X" = Standard applies								Comments
		Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	
Neurologic Disqualifying Conditions										
L21	History of the following types of headaches: a single incapacitating headache of any type (e.g., associated with loss or alteration of consciousness, aphasia, diplopia, vertigo, paralysis, or other systemic symptoms). History of migraine or its variants, to include acephalgic or ocular migraine. Recurrent headaches of migraine, cluster, or any other types that impair social, vocational, operational, or academic activities, or require prescription medications for management.		X	X	X	X	X	X	X	See AMWG.
L22	Narcolepsy, cataplexy, and similar states.	X	X	X	X	X	X	X	X	See G4 and G5 for OSA.
L23	Clinical sleep disorders that cause sleep disruption resulting in excessive daytime somnolence or interfere with duty performance. These include, but are not limited to, restless leg syndrome, periodic limb movements of sleep, insomnias, hypersomnias, parasomnias, narcolepsy or the requirement for stimulant medication to maintain wakefulness. Sleepwalking, somnambulism, and severe nightmares (which are not part of PTSD or any other unfitting mental health condition) are unsuited per DoDI 1332.18 Paragraph 3 (i) and AFI 36-3208 para 5.11. If unsuited, they are not subject to MEB, but may be subject to administrative discharge at the unit commander's discretion. (See comment section.)	X	X	X	X	X	X	X	X	Should the commander choose not to administratively separate these individuals with unsuited sleep disorder, you may submit an I-RILO for consideration of ALC-C only (not MEB or medical discharge), because these members are probably not WWQ. See AMWG.
L24	Peripheral nerve injuries or conditions such as: Neuralgia, neuritis, radiculopathy or neuropathy, when symptoms are severe, persistent, and do not respond to treatment. Neuritis or paralysis due to peripheral nerve injury, when manifested by more than moderate, permanent functional impairment. Paralysis, weakness, lack of coordination, sensory disturbance or other specified paralytic syndromes.	X	X	X	X	X	X	X	X	
L25	Any current or history of neuritis, neuralgia, or neuropathy, unless the condition has completely subsided (with no residual effects) and the cause has been determined to be of no future aeromedical concern.		X	X	X	X	X	X		
L26	Polyneuritis, whatever the etiology, unless: Limited to a single episode, the acute state subsided at least 1 year before examination, there are no residual effects which could be expected to interfere with normal function in any practical manner.		X	X	X	X	X	X		
L27	Traumatic brain injury when after adequate treatment, there remain persistent post-traumatic sequelae including but not limited to: focal neurological signs, headache, vomiting, weakness or paralysis of important muscle groups, deformity, incoordination, pain or sensory disturbance, disturbance of consciousness, speech disturbance, disorientation, spatial disequilibrium, impaired memory, poor mental concentration, shortened attention span, dizziness, altered sleep patterns, any other findings consistent with encephalopathy, or personality changes of such a degree as to definitely interfere with the performance of duty.	X	X	X	X	X	X	X	X	See AMWG
L28	History of head injuries associated with any of the following are not waiverable: Penetrating injury. Post-traumatic seizures (exception: seizures at the time of injury). Loss of over 25 cc brain volume on imaging studies. Persistent neurological deficits indicative of significant parenchymal CNS injury, such as hemiparesis or hemianopsia. Evidence of permanent impairment of higher intellectual functions or alterations of personality as a result of injury. Cerebrospinal fluid shunts. Head trauma with no loss of consciousness, amnesia, or abnormal findings on examination, does not require waiver.		X	X	X	X	X	X

	Retention	Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	Ground Based Controller (GBC)	Missile Operation Duty (MOD)	Operational Support Flying Duty	

[RETURN TO TABLE OF CONTENTS](#)

L29	History of mild head injury. LOC or amnesia < 30 minutes loss of consciousness or amnesia, with normal clinical examination and brain MRI, may be considered for waiver after 1 month.		X	X	X	X	X*	X*	*No waiver required with normal neurological examination. See AMWG.
L30	History of moderate head injury. LOC or amnesia with > 30 minutes but < 24 hours loss of consciousness or amnesia, or non-displaced skull fracture; normal MRI, may be considered for waiver after 6 months.		X	X	X	X	X	X	See AMWG
L31	Severe (LOC or amnesia > 24 hours; normal MRI or MRI demonstrating inconsequential hemorrhage or evidence of diffuse axonal injury or hemosiderin deposition/plugs, presence of subdural hematoma or brain contusion; penetrating head injury, or MRI demonstrating more significant abnormalities).		X	X	X	X	X	X	See AMWG
L32	Other intracranial hemorrhage, vascular insufficiency, aneurysm, arteriovenous or other vascular malformation.	X	X	X	X	X	X	X	
L33	History of diagnostic or therapeutic craniotomy, or any procedure involving penetration of the dura mater or the brain substance including ventricular-peritoneal shunts, evacuation of hematomas, and brain biopsy.		X	X	X	X	X	X	
L34	Leptomeningeal cysts, pneumocephalus, or arteriovenous fistula.		X	X	X	X	X	X	
L35	Intracranial, meningeal, or other neurologic benign or malignant neoplasm.	X	X	X	X	X	X	X	See D17, L36.
L36	History of benign or malignant neoplasms of the brain, pituitary gland, spinal cord, or their coverings.		X	X	X	X			See D17, L35.
L37	History or evidence of such defects as basilar invagination, hydrocephalus, premature closure of the cranial sutures, meningocele, and cerebral or cerebellar agenesis, if there is evidence of impairment of normal functions, or if the process is expected to be progressive.	X	X	X	X	X	X	X	
L38	Infectious diseases of the central nervous system, including, but not limited to meningitis, encephalitis, neurosyphilis, or brain abscess.		X	X	X	X	X	X	See AMWG
L39	Stroke, transient ischemic attack, hemodynamically significant cerebrovascular arteriosclerosis, intracranial thrombosis, subarachnoid hemorrhage, parenchymal hemorrhage, CNS aneurysm, arteriovenous or other vascular malformations, or cranial neuropathy. *For FC I/IA, FC II, RPA Pilot and FCIII also includes history of the above.	X	X	X	X	X	X	X	See AMWG
L40	History of evidence of immune-related disorders such as myasthenia gravis, Lambert-Eaton myasthenic syndrome, autoimmune disorders or paraneoplastic conditions with neurologic dysfunction.	X	X	X	X	X	X	X	
L41	Evidence or history of involvement of the nervous system by a toxic, metabolic or disease process, if there is any indication such involvement is likely to interfere with prolonged normal function in any practical manner, is progressive or recurrent, or if there is a significant neurological residual which would interfere with aviation/controlling/chamber duties.		X	X	X	X	X	X

Disqualifying Conditions										
Q29	Disruptive, Impulse-Control and Conduct Disorders, current or history of after age 12.		X	X	X	X	X	X	X	See Note 1.
Q30	Substance Related and Addictive Disorders, current or history of.		X	X	X	X	X	X	X	See Note 1.
Q31	Medical complications of an alcohol or substance use disorder (such as but not limited to bleeding varices, cirrhosis, persistent hallucinosis) require preliminary DAWG review and I-RILO (Fitness for duty for ARC) processing when the medical complication calls into question the continued ability of the Airman to meet retention standards.	X	X	X	X	X	X	X	X	If doing an MEB for the sequelae of substance use, the history of the substance use/disorder must also be fully written up and submitted as part of the NARSUM. See Note 8.
Q32	Neurocognitive Disorders (Delirium, Dementia, and Amnesic Disorders, and Other Cognitive Disorders).	X	X	X	X	X	X	X	X	See NEURO Section and Note 1
Q33	Personality Disorders.		X	X	X	X	X	X	X	See Note 1.
Q34	Sexual Dysfunctions, Sexual/Gender Identity Disorders (including Gender Dysphoria) and Paraphilic Disorders.	X*	X	X	X	X	X	X	X	See Note 1. *For retention, identifying as gender non-conforming or transgender is not automatically disqualifying from continued service if there is no duty impact. See AFI 36-3208 5.11 and coordinate with their commander to determine if the condition is unsuiting and may require administrative evaluation.
Disqualifying Conditions (Miscellaneous Criteria and Consideration)										
Q35	Adaptability Rating for Military Aviation - Unsatisfactory ARMA/AR-GBC/AR-MOD for applicant's crew position. Maladaptive personality traits (not meeting diagnostic criteria for a personality disorder), or a pattern of maladaptive behavior that significantly interferes with safety of flight, crew coordination, or mission completion. In the absence of maladaptive personality adjustment, traits, or behavior patterns, motivational issues are managed administratively and the AR must be rated satisfactory.		X	X	X	X	X	X	X	See ARMA on KX
Q36	History of attempted suicide or suicidal behavior.		X	X	X	X	X	X	X	See AMWG . See Q6. For suicide attempts by ARC members See Note 3.
Q37	Other Conditions that are a focus of clinical attention (V Code problems) when they result in DNIF, DNIC or generated a DLC lasting greater than 60 days.		X	X	X	X	X	X	X	

[RETURN TO TABLE OF CONTENTS](#)

Section Q: Psychiatry and Mental Health Notes:

Note 1: Preliminary DAWG review and I-RILO are indicated in those instances where a mental disorder, which may be considered a disability by the SECDEF, precludes satisfactory performance of duty, worldwide assignability or deployment. Other mental health diagnoses, not considered disabilities by the SECDEF, can make an Airman potentially unsuitable for further military service and subject to administrative separation. Potentially unsuiting mental health diagnoses and conditions are listed in [AFI 36-3208 5.11](#). Incapacity because of disability (i.e., potentially unfit for duty) must be distinguished from lack of motivation or underlying personality disorder, etc. (i.e. potentially unsuitable for duty). Potentially unsuiting mental health diagnoses, when present with potentially unfitting mental disorders can clearly worsen overall impairment and prognosis (e.g. personality disorder and depressive disorder). In cases where more than one mental disorder is present, and the primary source of impairment for military duty cannot be readily determined, the default pathway is for preliminary DAWG review and I-RILO processing. If a potentially unfitting mental disorder is present while an Airman is pending administrative separation, the Airman's commander contacts the local MPF and Staff Judge Advocate for specific guidance. Also see Note 3, below. Airmen who are eligible for "legacy" disability evaluation (versus Integrated Disability Evaluation system processing) will follow applicable procedures to accomplish.

Note 2: ARC members diagnosed with a mental disorder will receive either an initial RILO or a non-duty related fitness for duty evaluation. Reserve providers must look closely at any member on psychotropic drugs to determine if any mental disorder exists. For ANG members on long-term antidepressant or anti-anxiety maintenance therapy, even if asymptomatic or in remission, an initial RILO or Fitness for Duty evaluation must be forwarded to NGB/SGPA for consideration and possible ALC stratification. AFRC members on psychotropic drugs for non-psychiatric diagnoses do not need a WWD evaluation based on this section. For all other questionable cases, please forward to ANG/SGPA for determination.

Note 3: Following any active duty suicide attempt, the MTF SGH will lead a meeting to review the case and determine the medical disposition of the individual; this meeting must include at least one mental health provider. An active duty Airman with a potentially unfitting diagnosis will meet a preliminary DAWG review. For suicide attempts by ARC members, a fitness for duty determination will be instituted.

Note 4: Individuals diagnosed with Attention-deficit/hyperactivity disorder (ADHD) must be carefully evaluated for suitability for continued service. This condition is not considered a disability by the SECDEF and may be managed administratively IAW [AFI 36-3208](#), paragraph 5.11.4. If treatment with medication is required for adequate duty performance, referral to the unit commander for determination of administrative disposition is appropriate. Use of psychostimulants solely to optimize cognitive performance is strictly prohibited. If the servicemember does not require treatment with medication for adequate duty performance, the member remains suited for continued military service. The commander may seek administrative separation based on impaired performance. In rare circumstances, the commander may request waiver consideration to allow for continued duty if the value to the unit outweighs risks of requiring medication. This policy does not apply to operational "Go Pill" use.

Note 5: Specific Phobia to Flying requires appropriate mental health evaluation and treatment. High cure rates are expected. If it is not amenable to treatment and it is of sufficient magnitude to preclude military air transportation, it is dealt with administratively.

Note 6: "Fear of Flying" or "manifestation of apprehension" are line terms used when a trained or untrained aviator refuses to fly or exhibits a "reluctance to fly". The aviator may present with medical/psychological reasons for not flying. If no mental disorder is found and medical causes are ruled out the disposition is handled administratively by the command, and is not a medical DQ. Great care must be exercised to distinguish a Specific Phobia to Flying (a highly treatable mental health disorder) from a "fear of flying" which is a rational and/or motivational decision to limit risk. [ACS Neuropsych available to help make distinction.](#)

Note 7: Disorders due to a traumatic occupational stressor should be considered temporary and the individual should be allowed to perform their duties to the fullest extent possible (without risk to mission, member or safety of flight). Therapy with occupational exposure to the stressor is first line therapy for many of these disorders. Mild symptoms without risk to mission, member or safety of flight do not require duty restriction.

Note 8: When preparing a narrative summary (NARSUM) for the sequelae of substance use, the history of the substance use/disorder must also be fully written up and submitted as a separate MH NARSUM appended to the medical NARSUM. Airmen with a medical complication due to alcohol use disorder cannot be administratively separated without preliminary DAWG review and I-RILO processing. [See Q31.](#)

[RETURN TO TABLE OF CONTENTS](#)

Section R: USAF Medical Serial Profile Annotation

	1	2	3	4
P: Physical Condition	Free of any identified organic defect or systemic disease.	Presence of stable, minimally significant organic defect(s) or systemic diseases(s). Capable of all basic work commensurate with grade and position. May be used to identify minor conditions that might limit some deployments to specific locations.	Significant defect(s) or disease(s) under good control. Capable of all basic work commensurate with grade and position.	Organic defect, systemic or infectious disease which requires, or is currently undergoing, an MEB or I-RILO as determined by the Deployment Availability Working Group (DAWG).
U: Upper Extremities	Bones, joints, and muscles normal. Able to do hand-to-hand fighting.	Slightly limited mobility of joints, mild muscular weakness or other musculoskeletal defects that do not prevent hand-to-hand fighting and are compatible with prolonged effort. Capable of all basic work commensurate with grade and position.	Defect(s) causing moderate interference with function, yet capable of strong effort for short periods. Capable of all basic work commensurate with grade and position.	Severely compromised strength, range of motion, or general efficiency of the hand, arm, shoulder girdle, or back (includes cervical and thoracic spine) which requires, or is currently undergoing, an MEB or I-RILO as determined by the DAWG.
L: Lower Extremities	Bones, muscles, and joints normal. Capable of performing long marches, continuous standing, running, climbing, and digging without limitation.	Slightly limited mobility of joints, mild muscular weakness, or other musculoskeletal defects that do not prevent moderate marching, climbing, running, digging, or prolonged effort. Capable of all basic work commensurate with grade and position.	Defect(s) causing moderate interference with function, yet capable of strong effort for short periods. Capable of all basic work commensurate with grade and position.	Severely compromised strength, range of motion, or efficiency of the feet, legs, pelvic girdle, lower back, or lumbar vertebrae which requires, or is currently undergoing, an MEB or I-RILO as determined by the DAWG.
H: Hearing (Ears). See Hearing Section for Hearing Profile.				
E: Vision (Eyes)	Minimum vision of 20/200 correctable to 20/20 in each eye.	Vision correctable to 20/40 in one eye and 20/70 in the other, or 20/30 in one eye and 20/200 in the other eye, or 20/20 in one eye and 20/400 in the other eye.	Vision that is worse than E-2 profile.	Visual defects worse than E-3 which requires, or is currently undergoing, an MEB or I-RILO as determined by the DAWG.
S: Psychiatric Stability	Diagnosis or treatment results in no impairment or potential impairment of duty function, risk to the mission or ability to maintain security clearance.	World Wide Qualified and diagnosis or treatment result in low risk of impairment or potential impairment that necessitates command consideration of changing or limiting duties.	World Wide Qualified and diagnosis or treatment result in medium risk due to potential impairment of duty function, risk to the mission or ability to maintain security clearance.	Diagnosis or treatment resulting in high to extremely high risk to the AF or patient due to potential impairment of duty function, risk to the mission or ability to maintain security clearance which requires, or is currently undergoing, an MEB or I-RILO as determined by the DAWG.

Section S: USAF Medical Standards for SERE

The SERE Specialist Training course is physically and mentally demanding and requires the ability to withstand rigorous conditioning. On a daily basis SERE candidates will need to be able to withstand mountain climbing, heat and cold exposure, backpacking with a weight up to 70 pounds, running for long distances, and be able to perform pushups, pull ups and sit ups without difficulties. A medical examination recorded on DD Form 2808 and DD Form 2807-1 specifically for SERE Specialist duty is required at the time of application. Initial trainees must complete an IFCIII and Static Line requirements IAW Inter Service School Requirements ([See SSR](#)) physical as well as meet the following standards:

Item	Initial SERE Standard	Comments
S1	Any condition listed in MSD for retention standards.	See Retention Column in Sections A-Q
S2	Profile less than P-1, U-1, L-1, H-2, E-2, S-1, except the uncorrected distant vision is not worse than 20/400 each eye corrected to 20/20.	
S3	Speech impediment which interferes with clear enunciation. At a minimum, a Reading Aloud Test (RAT) is required.	
S4	History of recurrent or chronic back pain.	
S5	Scoliosis over 25 degrees measured by the Cobb method. Any other abnormal curvature of the spine of any degree in which there is a noticeable deformity and there is pain, or interference with function, or which is progressive.	
S6	Spondylolysis or spondylolisthesis, if symptomatic.	
S7	History of recurrent knee pain or chondromalacia of the patella. A history of knee surgery requires an orthopedic evaluation and a demonstrated ability of at least 1 year of strenuous physical activity not requiring a brace.	
S8	History of recurrent shin splints.	
S9	History of recurrent ankle sprains.	
S10	History of recurrent foot pain.	
S11	History of stress fractures.	
S12	History of any vertebral fractures, except that history of a healed, asymptomatic fracture of the transverse process is not disqualifying.	
S13	History of surgery involving a major joint requires an orthopedic evaluation.	
S14	History of frostbite or chilblains or a history of heat exhaustion.	
S15	History of asthma, reactive airway disease or exercise induced breathing difficulties.	
S16	Allergy to stinging insects, pollen, trees, grasses, or dust unless desensitized and controlled on maintenance dosage.	
S17	Deficient night or color vision.	
S18	Food aversions, insect or snake phobias.	
S19	History of personality or behavior disorders.	
S20	History of substance use disorder.	
S21	History of suicidal gesture or attempt.	
S22	Intolerance to close or confined spaces.	
S23	Mental health condition that indicates the applicant is unable to accept constructive criticism or unable to function in a high stress environment.	
SERE Retention Standard		
S24	A trained and experienced survival instructor is considered using (S1-S23) standards as a guide, but continued duty is dependent upon the member's demonstrated ability and performance.

		“X” = Standard applies				Comments
		Flying Class I/IA	Flying Class II	RPA Pilot	Flying Class III	
Weight and Anthropometric						
Standing Height						
T1	FCI height less than 64 inches or more than 77. FCIA and Initial FCII (FS) height less than 64 inches or more than 77.	X				Waivers may be considered by weapons system. See AMWG
T2	Height less than 64 inches or more than 77 inches.		X		X	Note: Weapons Controllers/Directors, Combat Control, Pararescue and Air Battle Managers have no standard.
Functional Reach						
T3	Minimum functional reach for aeromedical evacuation duties is 76 inches, regardless of height.				*	*Initial FC III for 1AXX1, 46FX and 4N0XX (Aeromedical Evacuation Technician only).
Sitting Height						
T4	FCI Sitting height greater than 40 inches or less than 34 inches. FCIA - sitting height greater than 40 inches or less than 33 inches.	X				See physical examination techniques for method of measurement.
T5	IFCII (FS) Sitting height greater than 40 inches or less than 33 inches.		X			See physical examination techniques for method of measurement.
Buttock to Knee						
T6	FCI Buttock to knee measurement no greater than 27 inches. (FCI or FCII no greater than 26.7 inches for A-10 aircraft only.)	X				See physical examination techniques for method of measurement.
Weight						
T7	For initial qualification members must meet fitness standards IAW AFI 36-2905 , <i>Fitness Program</i> .	X	X	X	X	Same applies to retention standards.
T8	Additional standard applies for duties in ejection seat aircraft; in no case may weight be less than 103 lbs or greater than 240 lbs for T-38 and 245 lbs for all other ejection seat aircraft. Weights are unclothed (nude) body weight. Note: For UPT students, fighter-track UNT students and trained ejection seat aircrew identified outside of the weight for ejection seat standard, notify Squadron/CC via AF Form 1042 (or DD Form 2992) and/or AF Form 469 action.	X	X		X	
T9	For trained personnel in ejection seat aircraft. Weight may not be less than 103 lbs or greater than 240 lbs for T-38 and 245 lbs for all other ejection seat aircraft. Weights are unclothed (nude) body weight.		X		X	
T10	Any aircrew member assigned to ejection seat aircraft who has failed to attain/maintain weight within the ejection seat standard will be placed DNIF and referred to the Squadron/CC for appropriate administrative action.		X		X

Section U: Small Unmanned Aircraft System Operator Medical Standards (SUAS-O)

The following are the minimum medical standards for SUAS-O **Group 2 & 3**. A SUAS is defined by AF/A3.

~~U1. SUAS-Os are special duty personnel and will be empaneled to Flight Medicine. DELETED 4 May 18~~

~~U2. SUAS-O must meet retention medical standards IAW AFI48-123 and MSD. DELETED 4 MAY 18~~

U3. SUAS-O must have intact color vision determined by passing CCT with **55** or above. “Passed by record” is adequate if the member has a documented passing CCT result, unless there is a clinical indication for retesting.

U4. SUAS-O must have distant and near visual acuity correctable to 20/20 OU or better.

U5. SUAS-O must have no medical condition present which may incapacitate an individual suddenly or without warning.

U6. Personnel may not perform SUAS-O duty while using any medication whose known common adverse effect or intended action(s) affect alertness, judgment, cognition, special sensory function or coordination. This includes both over the counter and prescription medications.

U7. SUAS-O personnel require **INITIAL certification** for SUAS duties. This is documented on AF Form 422.

Do not use PEPP or DD Form 2992 for selection, grounding, or duty limitations. Duty restrictions for these members will be managed on AF Form 469.

If a SUAS-O does not meet above vision standards, decision on employment for SUAS-O duty is with the operational commander. Medical waiver is not required

Commercial Off The Shelf (COTS) systems and Group 1 SUAS are excluded from [Section U](#).

For contract SUAS-O, medical management will be accomplished in accordance with the individual operator’s contract.

Section V: USAF Specific Deployment Standards

In addition to the general DoD deployment criteria listed in [DoDI 6490.07](#), *Deployment-Limiting Medical Conditions for Service Members and DoD Civilian Employees*, the following criteria must be met in order for USAF members to be considered deployable. Please refer to AFI 48-123 prior to reviewing the additional criteria below. Additional requirements may be required for specific deployments; See COCOM reporting instructions.

- V1. Must be able to perform duties of AFSC for a prolonged period (at least 12 hours).
- V2. Must have adequate night vision to be able to travel unassisted at night.
- V3. At a minimum must be able to carry all required deployment baggage (at least 40 lbs) and additional requirements for duty or deployment AFSC.
- V4. Must be able to run at least 100 yards to take cover.
- V5. Must be able to subsist on field rations for up to 179 days.
- V6. Must be able to perform duties in hot and cold environments, without any known predisposition to heat or cold injury.

Note: [DoDI 6490.07](#) E3.a.(2) states “Conditions that prohibit immunizations” is a medical condition precluding deployment and requires a waiver.
